Application No.: 10/081627 Docket No.: 00306-00203-US

Amendments to the Specification

Please amend the paragraph at page 2, lines 20-22 of the specification as follows:

We have found that the invention <u>can work</u> without a polyhydric alcohol or a mixture of polyhydric alcohols. Furthermore, the invention can be practiced with an eye <u>irritation</u> <u>irritating</u> amount of carboxylic acid which is the opposite taught by WO 00/41567.

300203

Application No.: 10/081627 Docket No.: 00306-00203-US

Please amend the paragraph at the bottom of page 3 starting at line 25 through page 4 line 6 of the specification as follows (the formula has been redrawn):

A further embodiment of the invention is a composition comprising:

- (a) a phosphorous containing acid providing that the phosphorous containing acid is not a glyphosate,
- (b) an amine containing surfactant of the formula:

$$\begin{array}{c} \text{CH}_3 \\ \text{H-(OCH}_2\text{CH}_2)_x(\text{CH}_2\text{CHO})_x \\ \text{CH}_3 \\ \text{N-CH}_2\text{CH}_2 - \text{N} \\ \text{CH}_3 \\ \text{CH}_3 \\ \text{CH}_2\text{CHO})_a(\text{CH}_2\text{CH}_2\text{O})_{\overline{b}}\text{H} \\ \text{CH}_3 \\ \text{CH}_3 \\ \text{CH}_3 \\ \text{CH}_3 \\ \text{CH}_3 \\ \text{CH}_2 \\ \text{$$

$$\begin{array}{c} \text{CH}_3\\ \text{H-(CH}_2\text{CH}_2\text{O)}_x\text{(CH}_2\text{CHO)}_x\\ \text{CH}_3\\ \text{CH}_2\text{CHO)}_x\text{(CH}_2\text{CHO)}_x\\ \text{CH}_3\\ \text{H-(CH}_2\text{CH}_2\text{O)}_r\text{(CH}_2\text{CHO)}_s\\ \end{array}$$

where x,y,a,b,c,d,r, and s are independently a number from 0-100, with the proviso that the sum of a+b+c+d+r+s+x+y must be at least 4,

(c) at least one water soluble agricultural chemical with the proviso that the composition contains less than 3 percent by weight of phosphate ester surfactant.

Application No.: 10/081627 Docket No.: 00306-00203-US

Please amend the paragraph at the bottom of page 6 lines 1-10 of the specification as follows (the formula has been redrawn):

The block copolymer derived from the sequential addition of ethylene oxide and propylene oxide to ethylenediamine is of the formula:

$$\begin{array}{c} \text{CH}_3\\ \text{H-(OCH}_2\text{CH}_2)_x(\text{CH}_2\text{CHO})_y\\ \text{CH}_3\\ \text{N-CH}_2\text{CH}_2-\text{N} \\ \text{CH}_3\\ \text{H-(OCH}_2\text{CH}_2)_r(\text{CH}_2\text{CHO})_s\\ \end{array}$$

$$\begin{array}{c|c} \text{CH}_3 \\ \text{H-(CH}_2\text{CH}_2\text{O)}_x\text{(CH}_2\text{CHO)}_x \\ \hline \\ \text{CH}_3 \\ \text{(CH}_2\text{CHO)}_a\text{(CH}_2\text{CH}_2\text{O)}_{\overline{b}}\text{H} \\ \hline \\ \text{H-(CH}_2\text{CH}_2\text{O)}_r\text{(CH}_2\text{CHO)}_s \\ \hline \end{array}$$

where x, y, a, b, c, d, r, and s are identical or different are a number from 0 to 100, with the proviso that the sum a+b+c+d+r+s+x+y must be at least 2. The most preferred fatty amine alkoxylate surfactant is a tallowamine ethoxylate. The fatty amine containing surfactant can be present in an amount from about 1 to about 99%. Preferably, the fatty amine containing surfactant is present in an amount sufficient to enhance the efficacy of the crop protection chemicals.
